Product Description:

NU Series bi-directional seal knife gate valve with a cast iron body has a standardized knife gate valve structure, including the valve body, the gate, and the U-shaped flexible seal at the bottom of the body. When the valve is closed, the bottom edge of the gate compresses the seal into the groove of the body. When the gate opens, the seal will bounce back to same level as the groove, which will prevent media sediment from accumulation in the body groove. The advantages are: no clogging, no residue, the pipe is easy to clean; in such a way, the sealing effect of the knife gate valve is effectively improved.
